DBMS LAB ASSIGNMENT – 1

ERD FOR TRAVEL AGENCY

Weak Entity Interpretation

In a relational database, a weak entity is an entity that cannot be uniquely identified by its attributes alone; therefore, it must use a foreign key in conjunction with its attributes to create a primary key. The foreign key is typically a primary key of an entity it is related to. But, as every entity here in the above Entity-Relationship diagram has it's own primary key, there aren't any weak entities here.
